SHAKE WELL BEFORE USING  
Do not add water to container.

1. SHARPSHOOTER is formulated to aid the control of drift in spray solutions.

SUGGESTED RATES: Use 3-8 ounces per 100 gallons of spray solution. SHARPSHOOTER should be slowly added to spray solution while agitating. Allow 3-4 minutes of agitation before spraying; longer agitation will increase viscosity.

Rates can vary dependant upon pressure, spray solution, wind speed, nozzle selection and configuration.

2. SHARPSHOOTER also aids in sinking spray solutions when used at higher rates.

SUGGESTED RATES: Use 1/2-1 gallon per 100 gallons of spray solution. Add slowly while agitating.

3. SHARPSHOOTER also aids sticking and spreading spray solutions at lower rates.

SUGGESTED RATES Use 1-3 ounces per 100 gallons of spray solution.
